

Coffee Filter Tie Dye

Materials

- White coffee filters
- Washable markers
- Rubbing alcohol
- A dropper or spoon

Activity

- Grab your favorite colors and create a design on your coffee filter.
 - Keep in mind that this design won't look the same after you "tie dye" it, so if you do something complicated and detailed, it is going to blur together.
- When your design is done, use your dropper or spoon to slowly drip the rubbing alcohol on the coffee filter
 - Start small, with just a few drops, see what happens and add more in little drops
- Try adding different colors after the filter dries! Do different color combinations make different patterns? If you just use one color, what happens?
