

ROBO RECYCLED

When thinking about being WILDly creative, you think of using resources found in nature. You can also use resources that would potentially be thrown in the waste. Today we are going to find whatever is just laying around our homes and create our vision of a robot. Your supplies could consist of old legos, used cans, used bottles and caps, paper towel rolls, shiny things like the inside of a chip bag, the possibilities are endless! The best thing about this robo recycled is that a robot is whatever you imagine it to be. Take your used resources and fasten them together however you please. This could be tape, glue, hot glue etc.
